QC-25

**HAM RADIO VERSION**

# BOSE QC -25 HEADSET with Dynamic Microphone

REFURBISHED AND MODIFIED by HAM-SET® FOR CONTESTING AND AMATEUR RADIO ACTIVITY

Have you spent so much money for headset that punctually gave you that annoying earache after only a few hours of contest or radio activity too?

Tired of not being able to hear the little DX signal because your partner is screaming like crazy in the middle of a breathtaking pile-up?

After 2 years of research, contesting, and tests, I managed to combine one of the best listening solution on the market with a versatile, fully compatible and lightweight boom microphone that could stand up to the great quality of Bose® brand.

That's how I came up with the idea of adding to the famous, lightweight and comfortable Bose QC25, equipped with a unique Noise Cancelling system (which really works), a compatible and versatile boom dynamic microphone.

Unfortunately in 2022 Bose ceased production of the QC 25, which are offered here refurbished in 3 different grades:

A: "As new", It has passed every functional test, looks as if it's never been used. It may show signs of light usage such as slight marks. Complete with original cardboard box, carrying case, all accessories and new earcups.

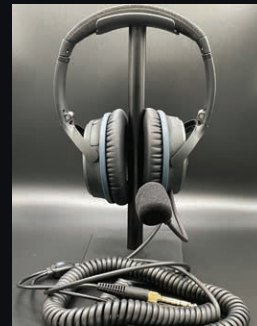

B: It has passed every functional test, looks like it has been gently used, good cosmetic condition complete with carrying case and new earcups.

C: It has passed every functional test, presents some signs of wear and tear. Complete with carrying case, and new earcups.

All headsets have been tested, cleaned and disinfected before being MODIFIED by adding a NEW PROFESSIONAL DYNAMIC CAPSULE microphone (not electret) and a NEW 5 m RF-proof coiled connection cable.

This headset fits the most radio brands on the market like Yaesu, Icom, Kenwood, Elecraft etc...like the famous HC4/5/6 capsule headsets you just need the simple adapter and no need to be connected to the +5v.
